

- ① Build Config.
- ② Image Stream.
- ③ Deployment Config vs Deployment.
- ④ Build & Image Management.
- ⑤ Internal Registry Work.
- ⑥ Image tagging & Promotion.
- ⑦ Build strategy - S2I
- ⑧ Podman Build
- ⑨ Custom Build
- ⑩ Build Trigger.
- ⑪ Application Lifecycle Mng.
- ⑫ Versioning & Rollback
- ⑬ Rolling vs recreate deployment.
- ⑭ Blue-green Deployment
- ⑮ Canary Deployment

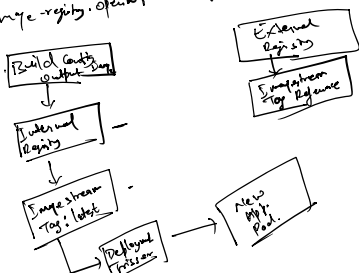

① Build Config:-

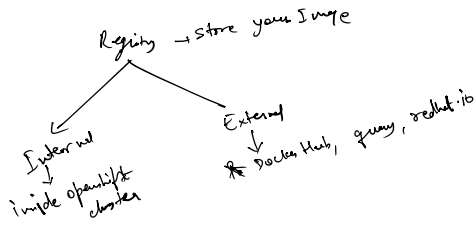

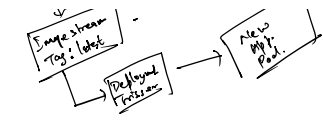

Define how the image will be created.

② Image Stream:- Not the Actual Image Track the version & tags

image-registry.operator.k8s.io:5000

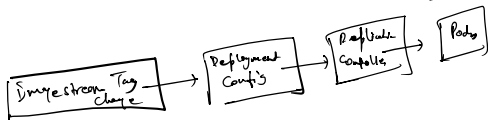

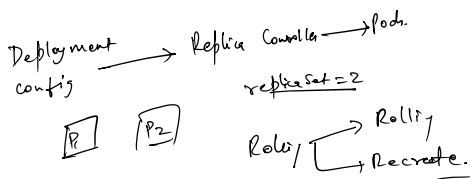

③ Deployment Config vs Deployment

Deployment - Kubernetes.

Deployment → Replica Set → Pods.

Deployment Config - OpenShift

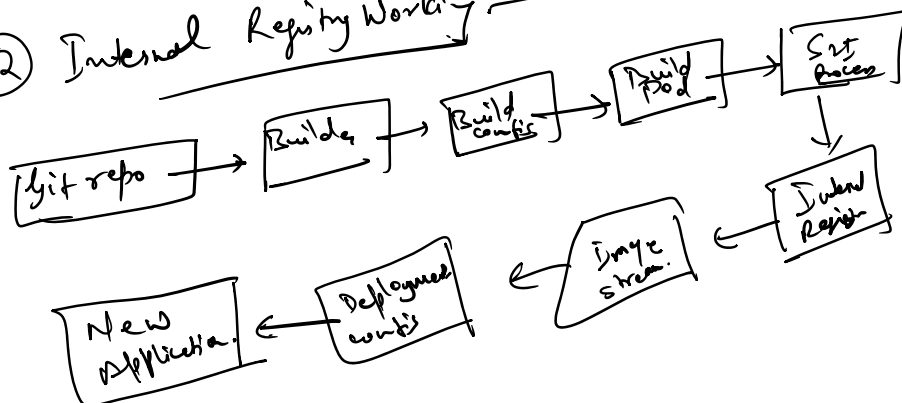

* Build & Image Mgr:-

- ② Internal Registry Works
- ③ Image Tagging & Promotion
- ④ Build strategies
 - S2I
 - Docker
 - Custom

(d) Build Trigger

② Internal Registry Working:-

⑤ Image tag & Promotion:-

Move the Image from one phase to Another, without any change in the image.

phase to Another, with
any change in the image.

name

Build strategies:-

① S2I

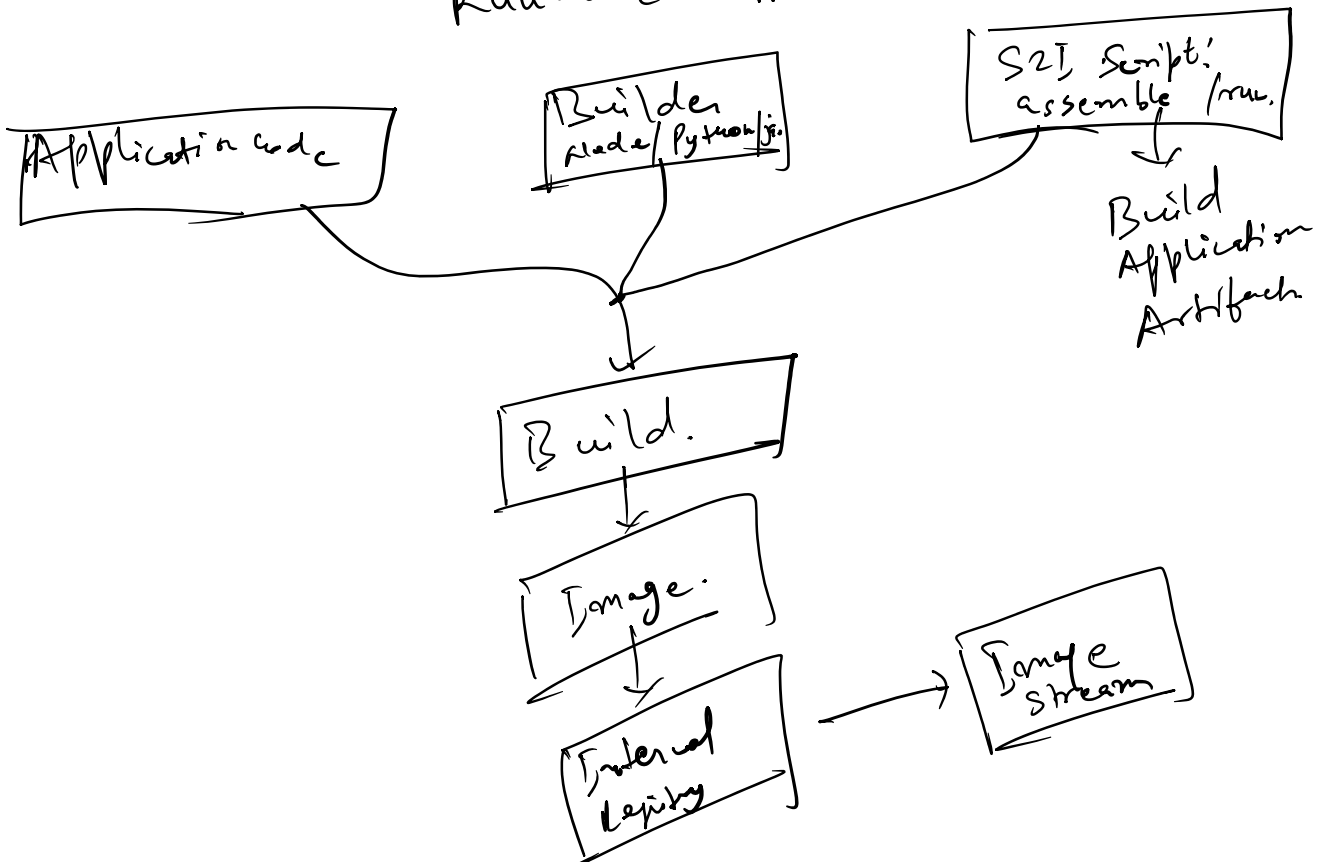

② Docker Image

③ Custom Build.

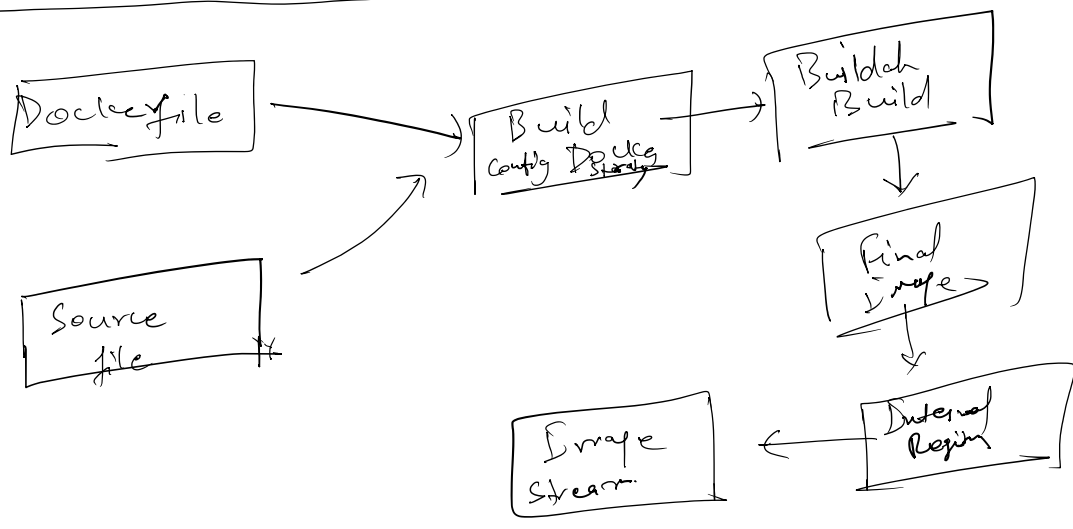

① S2I:-

Source Code + Builder Image.

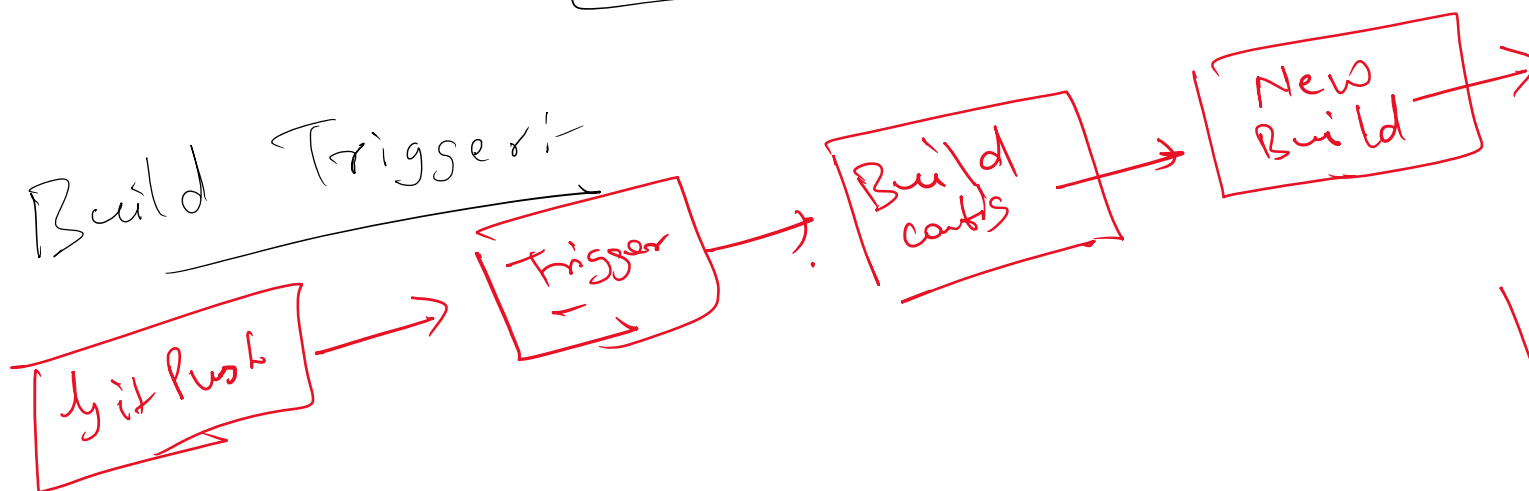

↓
Runnable Application Image

Docker Build strategy:-

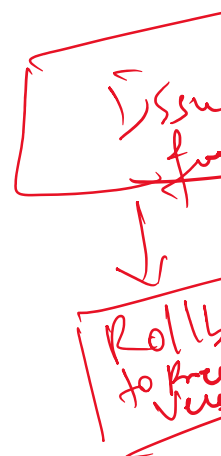

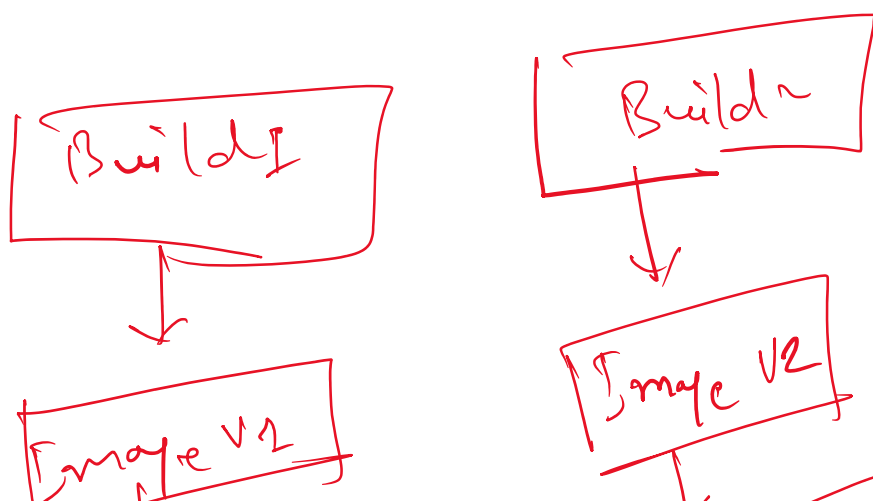

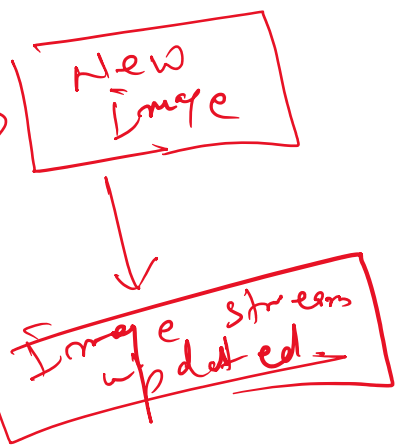

Build Trigger:-

Application lifecycle

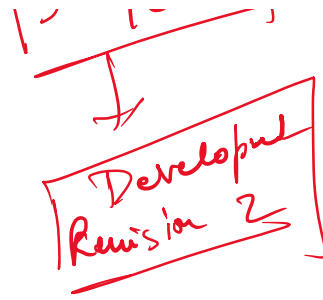

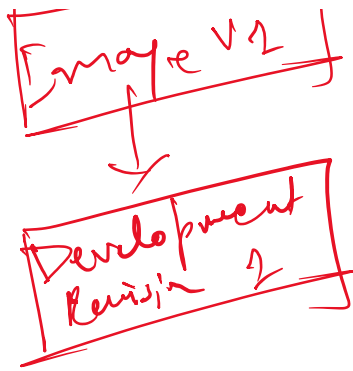

(1) Versioning & Rollback:-

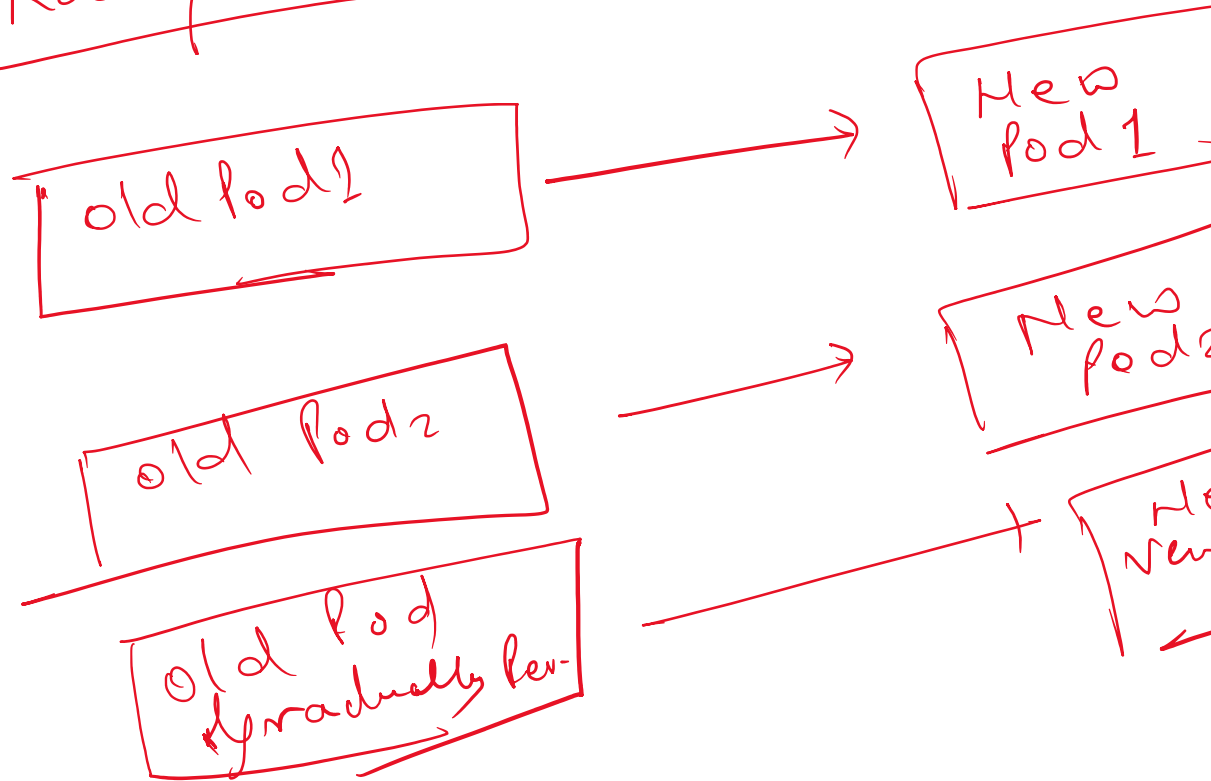

g

mission
ion.

② Rolling vs Recreate Deployment

Recreate deployment

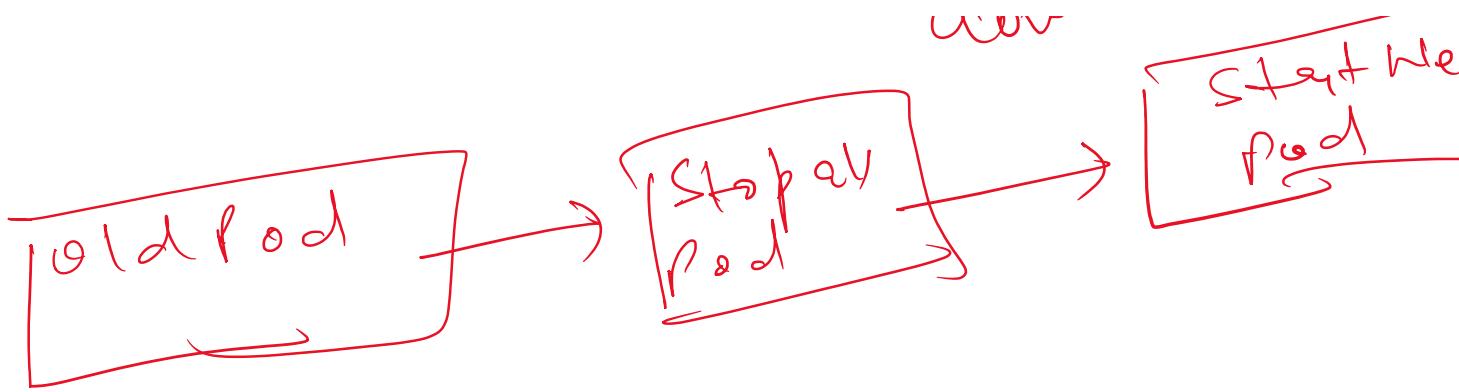

① Zero downtime

② App - support
two type of version

New
version fully
live.

pod!

→ New
version
Running.

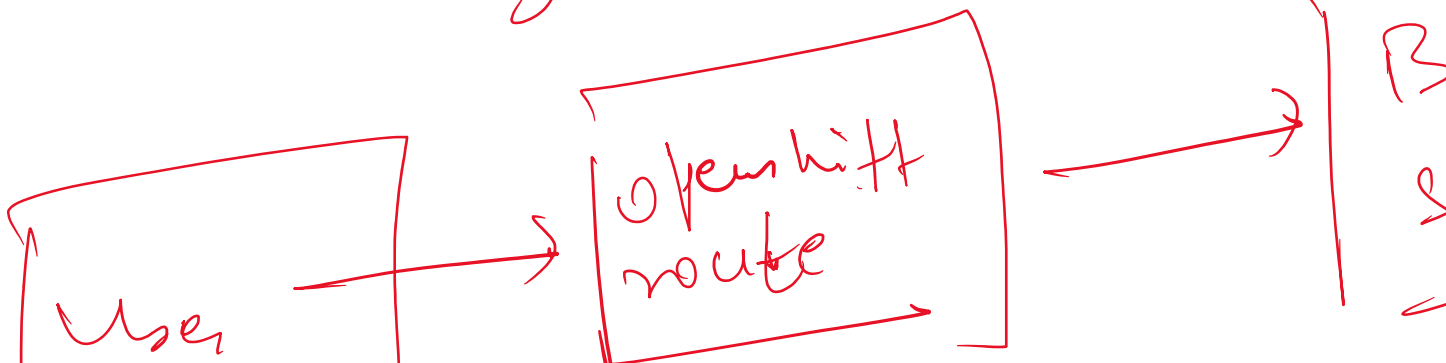

- ① Legacy app.
- ② Short downtime is acceptable.
- ③ old version.

Blue Green Deployment

Blue = Current

Green = new

→ version Runway
